

Parafon Exclusive Step

Elegant design with endless possibilities

The design ceiling Parafon Step in colours is still alive and kicking

In the Parafon Step concept, we work with sound absorbers in different sizes and thicknesses. The different levels and geometrical shapes can be mounted in different patterns, giving countless possibilities for variations. The free choice of colour provides additional opportunities to create an unique acoustic ceiling. For Parafon Step in optional colours, we utilize the contrast between the smooth surfaces and the rough structure of the stone wool, on the visible edges of the tiles, to create a dynamic and vivid expression.

We are now introducing the popular Step concept to the product range of Parafon Exclusive by adding a completely new product to the series. It combines the shapes and creative benefits of the Step concept, with the elegant look of the snow-white Exclusive surface and the fully covered white edges. These assets put together creates a completely new and fresh expression - Say hello to Parafon Exclusive Step!

Say hello to Parafon Exclusive Step

With Parafon Exclusive Step, you can create unique interior environments where the ceiling is not only a neutral base, but where it contributes to the interior design of the room. Parafon Exclusive Step is an elegant sound absorber with snow-white panels and fully covered white edges. The tiles are available in three different thicknesses in the most popular format 600x600 mm.

These acoustic panels can be mounted in different levels and patterns with almost unlimited possibilities. With the completely white design, the result is an elegant and exclusive surface - with a twist.

Local production in Skövde

The production is located at our Swedish factory in Skövde. Here we manufacture our acoustic panels with a special focus on the Nordic market. We produce the tiles from stone wool, which is excellent for sound absorption purposes. On top of that, it is a naturally durable and non combustible material. This means that we meet Nordic requirements for quality, fire safety, durability and design.

Facts

All three thicknesses of the Parafon Exclusive Step panels are classified within the sound absorption class A. This means that no matter how you choose to combine the different Parafon Exclusive Step tiles, you will always have a ceiling with sound absorption class A.

Easy to install

Parafon Exclusive Step is easy to install, as the tiles are mounted in standard T15-profiles, coloured in white. If you want to go even further to enhance the sleek and elegant look of the panels, you can also choose to install them with a profile that has a matte white surface.

Step E15

Combine and vary

Parafon Exclusive Step provides variation and flexibility to your ceiling. We encourage combinations using several of the different types of the Parafon Exclusive panels. You can switch between different tiles from the Parafon Exclusive concept in different rooms, or why don't you create an effect in a room by breaking off a smooth Exclusive-surface with the Exclusive Step tiles? The ceiling will come together as a unified whole because of the uniform, snow-white Exclusive surface.

Three different thicknesses creating different levels

18 mm - 34 mm - 50 mm

Parafon Exclusive Step is available in three different thicknesses that have different suspension levels from the grid system. As a result you get a variation of height levels in the ceiling. By mounting two or three thicknesses in different patterns it is possible to create new and unique variations according to your design wishes.

Irregular

Diagonal

The predefined patterns that we call "Irregular" and "Diagonal" are two examples on how you can install Parafon Exclusive Step sound absorbers in the format 600x600 mm. Both patterns have the same number of tiles in the three thicknesses; 18, 34 and 50 mm.

High-class design ceiling with elegant white surfaces

We have listened to what our customers have asked for and developed our new Parafon Exclusive Step panel with the extra white surfaces. With this addition to the popular Step concept you have a great freedom of design, with sound absorbers that suits environments with high aesthetic standards. The unique design features do not affect the quality standards of the product. It can in fact be used at locations with high demands for both sound absorption and moisture resistance.

Get in touch with us

Parafon is your Nordic supplier of acoustic design ceilings. If you want to know more, brainstorm ideas or if you need inspiration, please don't hesitate to contact our sound specialists. We enjoy talking about our passion and we are happy to take on any exciting challenge.
